75,000 POUNDS OF STEEL TAKE TO THE SKY OVER TRACY
DeHart Inc. scheduled to install massive HVAC systems

Tracy, Ca – With a helicopter, detailed plans and impeccable hand-eye coordination, an installation team from DeHart Inc. will provide heating and air conditioning to over 1 million square feet of warehouse space.

On Saturday, December 13, at 9 a.m. (weather permitting), DeHart Plumbing, Heating and Air Inc. of Modesto, Ca will install nearly 70 pieces of equipment. Complete HVAC systems will be installed on two new warehouses in Tracy at 1705 Chrisman Road. This is the second large commercial construction installation DeHart Inc. has completed in the last two months.

“We are very fortunate that at a time when many are feeling the effects of the economy, we will be completing one of the company’s largest commercial installation projects,” said Rod DeHart, President and third generation family owner. “It is encouraging to see growth in the commercial sector and we are pleased to be a part of it.”

With 16 air conditioning units and 53 exhaust fans to be installed, DeHart will require the assistance of a helicopter to transport each item onto strategically placed “roof curbs” on the buildings’ rooftops. Each item will be lowered from above with painstaking precision.

“A team of eight technicians will install over 75,000 pounds of equipment,” said John Hardin, Senior Project Manager. “The helicopter allows us to move each piece to the roof of buildings that occupy nearly one third of a mile.”

Established in 1946, DeHart Plumbing, Heating and Air Inc. is a family-owned and operated company located in Modesto, Ca. The company offers both residential and commercial customers a range of plumbing and HVAC services including repair, replacement, service agreements, air duct cleaning, and refrigeration services. DeHart’s unique commercial design/build service and upcoming LEED certifications allow the company to offer comprehensive commercial construction services.
